UNINSTALLING	8

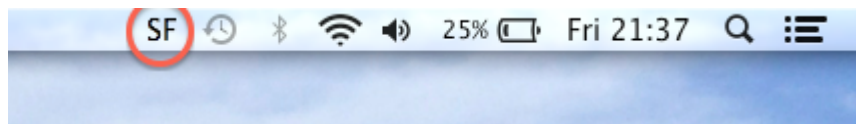

2. Installation

In order to install Metascan SmartFolder you just have to double-click the downloaded application and this installation window will show up:

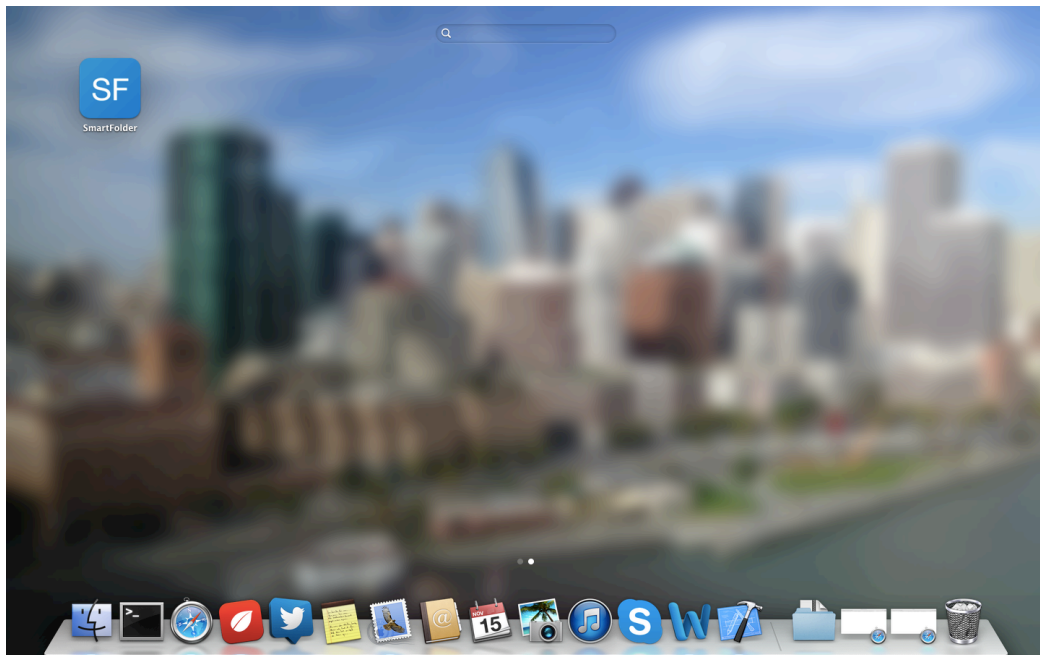

After reading the agreement, and only if you agree, click "Install" to proceed with the installation. Metascan SmartFolder will move itself to the Applications folder for you.

After the installation is done, you will find the program running on the status bar:

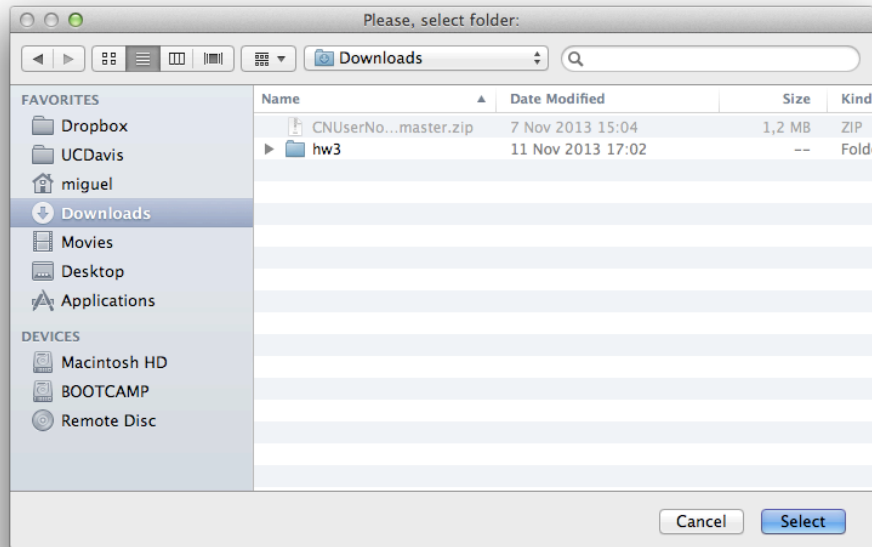

Also, a shortcut has been created in Launchpad (note: sometimes this shortcut is created on a new Launchpad page):

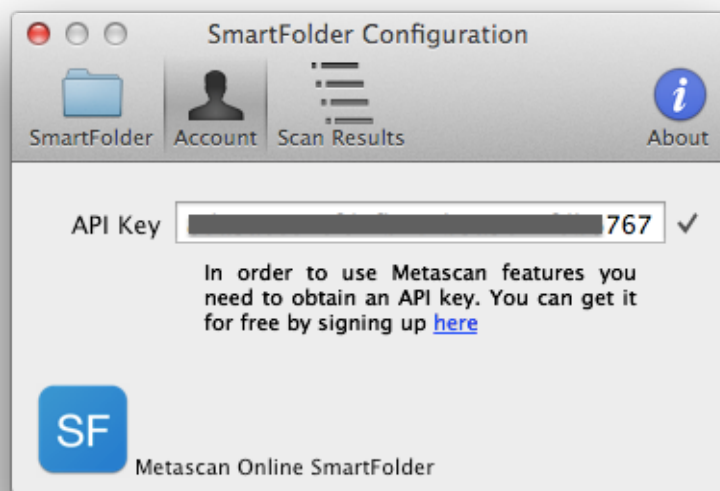

3. Configuration

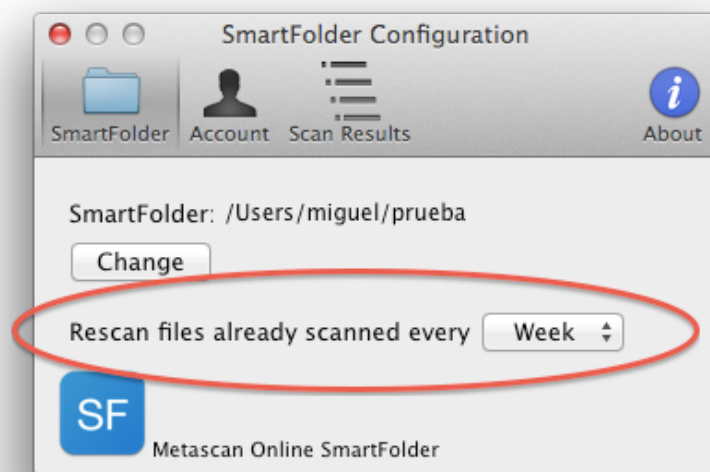

On first launch, you will be asked to select the folder you want to be continually monitored:

And to introduce a valid API Key:

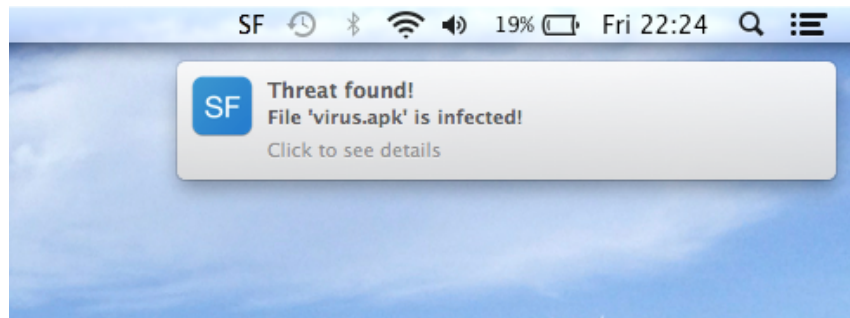

Optionally, you can specify a rescan time of the files already scanned:

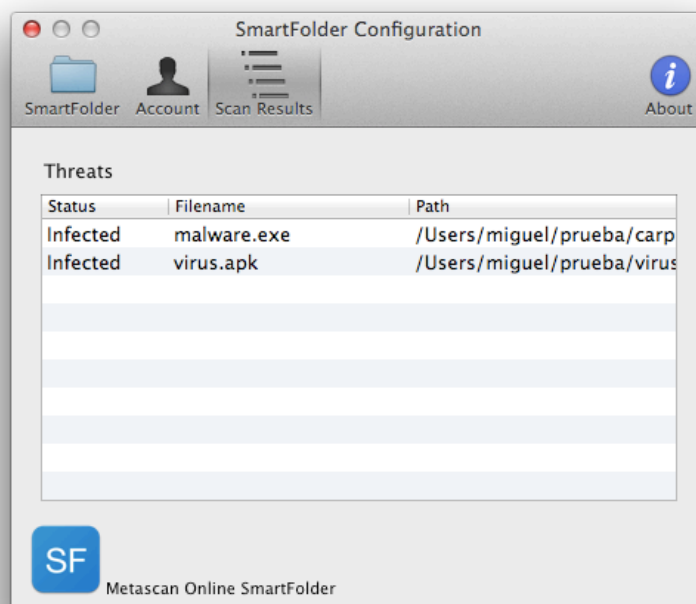

4. Monitoring

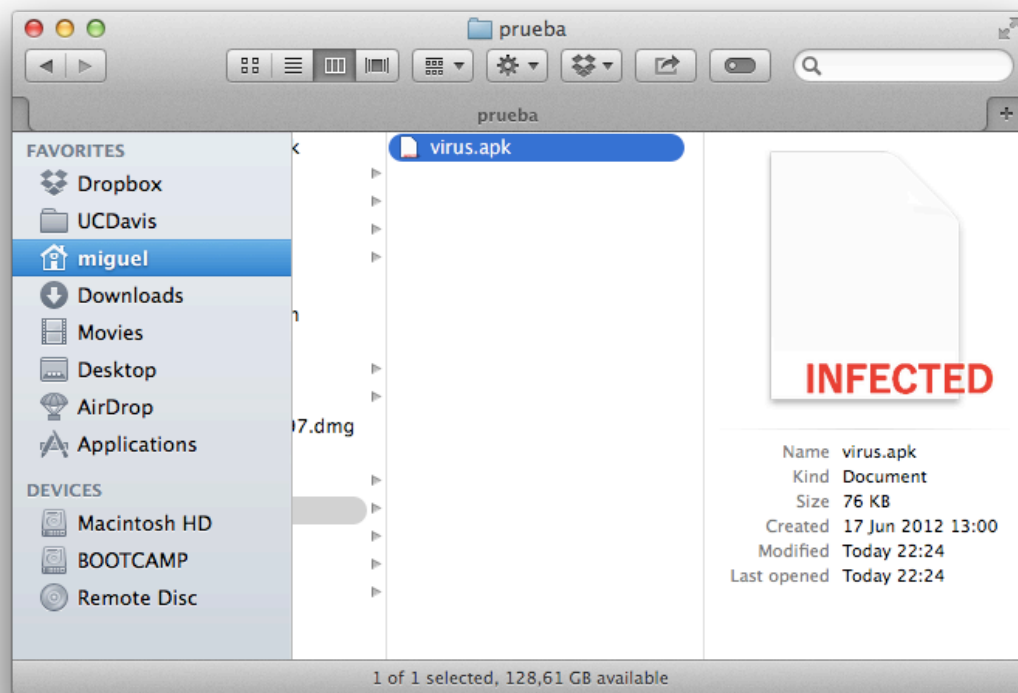

Metascan SmartFolder will be running silently until it finds a threat. In that case a notification will show up to let you know:

When you click on the notification, the scan results window will show up:

When an infected file is detected, Metascan SmartFolder will change its icon to let you know it is a dangerous file:

5. Uninstalling

If you want to uninstall Metascan SmartFolder, move it from the Applications folder to the Trash.
